Zscaler Certified Sales Engineer

PROFILE

System engineer who designs and builds security software end to end, as the only developer: the interface, the API, the data stores and the servers. My systems cover security operations (TENIX One), log storage with tamper evidence (TENIX DeepSpace), project and billing tracking (Project Hub), a screenshot tool (TENIX FullSnap) and a passive reconnaissance tool (10CYBER Recon). Before that I worked in SOC monitoring, data loss prevention and IT support. I hold 18 security and red-team certifications.

EXPERIENCE

System Engineer · TEN FORWARD CO., LTD.

Mar 2025 – Present

I design, build and run the company's in-house security and operations software. I built each system below on my own, from the first design to deployment, so the work spans the interface, the API, the data stores and the servers.

BUILT AT TEN FORWARD

TENIX One
Multi-tenant security operations platform

- Built the interface in Next.js and TypeScript and the API in Express, with three permission levels (Super Admin, Staff, Intern), an audit log and read-only per-tenant API tokens.
- Chose and modelled the data stores: PostgreSQL for users, tenants and settings; ClickHouse for high-volume logs.
- Integrated CrowdStrike Falcon, Cloudflare, Microsoft Graph, TP-Link Omada and LINE. Deploy and operate it behind nginx and pm2.
- About 66,000 lines of TypeScript in 57 commits, 9 June – 15 October 2026.

TENIX DeepSpace
Log data lake that runs inside the customer's own network

- Designed the data path: intake, buffer, three independent consumers and storage tiers, plus a separate evidence path that keeps writing if search fails.
- Wrote the backend services (Python, FastAPI), the parser design, the spec-driven connector engine and the Next.js console.
- Built the evidence vault (hourly blocks chained with sha256), two-step sign-in, the installer, release signing and console-driven updates.
- Measured on one development dataset: hot tier 15.8× and evidence vault 25.6× smaller than raw.

Project Hub
Contracts, warranty and billing tracker for a system-integrator business

- Designed the data model and REST API (Express, MongoDB, Redis) and built every screen in React and TypeScript.
- Wrote the automation: a nightly expiry job, LINE summary reminders and a read-only Integration API, with tests.
- Handled authentication, rate limiting, hashed API keys and webhook signature checks. Deploy it on PM2 and nginx.
- About 14,700 lines in the backend and 32,000 in the frontend.

TENIX FullSnap
Chrome extension for annotated, shareable screenshots

- Built the extension: full-page capture, numbered steps, arrows, text, blur for sensitive values, export to PNG, JPG or PDF with A4 splitting.
- Built its access-control module inside TENIX One: email OTP sign-in, department groups and a list of signed-in devices.

ALSO IN THIS ROLE

- **Log collection:** Configure and run CrowdStrike LogScale as a log collector for security data.
- **Environments:** Look after virtual machines on VMware ESXi and containerised services on Docker, with MinIO and PostgreSQL where the systems need them.

Live demos and project pages are on the portfolio site. Source repositories are private; a code walkthrough is available on request.

TECHNOLOGY

Languages
TypeScript · JavaScript · Python

Front end
Next.js · React · Vite · Tailwind CSS · TanStack Query · Zustand · Recharts · Apache ECharts · Chrome extensions

Back end
Node.js · Express · NestJS · FastAPI · Swagger / OpenAPI · JWT · Nodemailer · Winston

Data and messaging
PostgreSQL · MongoDB · ClickHouse · Redis · Redpanda · Kafka API · Parquet + ZSTD · MinIO / S3

Infrastructure and delivery
Docker · nginx · Nginx Proxy Manager · PM2 · VMware ESXi · Linux · Git · GitHub

Security and identity
Active Directory · OAuth 2.0 / OIDC · TOTP / MFA · bcrypt + Helmet · Forcepoint DLP · Boldon James · wafw00f

Integrations and automation
CrowdStrike Falcon API · CrowdStrike LogScale · Cortex XDR · Cloudflare API / WAF · Microsoft Graph · LINE Messaging API · TP-Link Omada · n8n · SNMP / BMC · Sentry

Reconnaissance sources
Shodan · Censys · Netlas · crt.sh · RDAP

SECURITY PRODUCTS

CrowdStrike · Palo Alto Networks Cortex · Zscaler · Netskope · Cloudflare · Cato Networks · Silverfort · Keyfactor · Cymulate · Horizon3.ai · KnowBe4 · AWS

Cybersecurity Analyst · Cybertron Company Limited — Aug 2024 – Feb 2025

- **Incident monitoring:** Monitored and triaged security incidents across several client environments for timely detection and response.
- **Threat analysis:** Analysed alerts, indicators and attack behaviour to judge severity and decide containment actions.
- **Prioritisation and escalation:** Prioritised intrusions by business impact and escalated critical threats to response teams within SLA timelines.
- **Reporting:** Wrote daily incident summaries and management-ready reports, and compiled trend statistics on suspicious activity.
- **Client advisory:** Gave practical recommendations and technical guidance to reduce recurring risks, and kept SOC work within incident-response procedures, ticket workflows and contractual SLAs.
- **Threat research:** Researched emerging attack vectors and adversary techniques to improve detection and response readiness.

Data Loss Prevention (DLP) Analyst · Metro Systems Corporation (at PTT Digital) — Aug 2023 – Jul 2024

- Monitored system incidents 24/7 with Forcepoint DLP and Boldon James.
- Notified end users and the right teams about data breaches, following the set procedure.
- Produced DLP incident reports and monthly summaries from the monitoring data.
- Distributed and maintained DLP agents for end users and coordinated Boldon James agent deployment to endpoints.

IT Support (outsource) · Acacia I.T. (at Krungthai Bank HQ) — Jan 2022 – Dec 2022

- IT support for banking systems and terminal hardware at the bank's headquarters.
- Resolved complex network connectivity problems (VPN) for bank staff in a secure environment.

EDUCATION

Bachelor's degree, Computer Engineering Technology
Rajamangala University of Technology Krungthep, 2018 – 2022

10CYBER RECON

Passive OSINT. A command-line tool that builds an exposure report for a domain from public sources. Python, sole developer. Source is on request.

All projects built solo · Live demos and project pages are on the portfolio site. Source repositories are private; a code walkthrough is available on request.
